## **Happy Birthday! - Five years of innovations at RAYLASE**

**Wessling.** RAYLASE AG in Wessling has been a guarantee for innovation and quality for five years now. Four former employees of GSI Lumonics founded the new company under the name "Scanpro Technology" with offices in Krailling near Munich. In May 2001 the company changed to its now familiar name: RAYLASE. The RAYLASE team conquered the market with OEM components and subsystems based on galvanometer scanners. The young company quickly established itself on the market and began to extend its field of action onto the international stage. RAYLASE AG operates and co-operates as part of a global research network. In the course of its healthy growth the number of employees has increased to 20, with no end to this upward trend in sight. The range of products has also been extended over this period, not least thanks to the worldwide patent for the innovative PCD technology. Thus, it was only a question of time before the premises in Krailling became too cramped. On May 1, 2003 RAYLASE AG moved to the "Five-Lakes" region of Wessling. Creativity and innovation can now develop freely near the city of Munich.
