## **New at RAYLASE AG:**

### **Marking-On-The-Fly-Option**

Marking moving objects is not magic for the firm of RAYLASE AG from Wessling near Munich. An additional module that goes by the name of "Marking-On-The-Fly-Option" (MOTF) allows the processing of moving parts at variable speeds of up to 7 m/s. The path speed signals are read in and processed in real time. The high resolution and compensation of angle errors by the software is another outstanding feature. Processing can be started by a trigger signal or depending on pre-defined intervals. The add-on card "Marking-On-The-Fly" (MOTF) can be easily combined with the PC control card SP-ICE, also available from RAYLASE AG. MOTF offers flexible use. It can be individually adapted to existing systems of the user via the DLL interface or integrated into the RAYLASE software package Winlase Editor.
